

Recombinant *Borrelia Garinii* VlsE1 protein, His-tagged

SPECIFICATION

Cat.No.	VlsE1-11B
Species	<i>Borrelia Garinii</i>
Product Name	Recombinant <i>Borrelia Garinii</i> VlsE1 protein, His-tagged
Product Overview	Recombinant <i>Borrelia Garinii</i> VlsE1 produced in E.coli is a non-glycosylated, polypeptide chain having a calculated molecular mass of 27,640kDa. <i>Borrelia Garinii</i> VlsE1 is expressed with a -6x His tag at N-terminus and purified by proprietary chromatographic techniques.
Description	<i>Borrelia</i> belongs to a genus of bacteria of the spirochete phylum. <i>Borrelia</i> causes borreliosis, which is a zoonotic, vector-borne disease transmitted mainly by ticks and some by lice, depending on the species. Of the 36 known species of <i>Borrelia</i> , 12 are distinguished to cause Lyme disease or borreliosis and are transmitted by ticks. The main <i>Borrelia</i> species causing Lyme disease are <i>Borrelia burgdorferi</i> , <i>Borrelia afzelii</i> , and <i>Borrelia garinii</i> . The <i>Borrelia</i> genus members have a linear chromosome which is about 900 kbp in length as well as an excess of both linear and circular plasmids in the 5-220 kbp size range. The plasmids are atypical, as compared to most bacterial plasmids, since they contain many paralogous sequences, a large number of pseudogenes and, in some cases, essential genes. Moreover, a number of the plasmids have features suggesting that they are prophages.
Source	E. coli
Tag	His
Form	Sterile Filtered clear solution. <i>Borrelia Garinii</i> VlsE1 is supplied in 20mM HEPES buffer pH-7.6, 250mM NaCl and 20% glycerol.
Molecular Mass	27.640kDa
Purity	Greater than 80.0% as determined by SDS-PAGE.
Usage	The products are furnished for LABORATORY RESEARCH USE ONLY. The product may not be used as drugs, agricultural or pesticidal products, food additives or

household chemicals.

Stability

Store at 4°C if entire vial will be used within 2-4 weeks. Store, frozen at -20°C for longer periods of time. Avoid multiple freeze-thaw cycles.
